SYSTEMS

MANUFACTURING & MAINTENANCE SYSTEMS

RAILWAYS

Simpro designs, manufactures and installs turnkey systems for rolling stock manufacturing and maintenance.

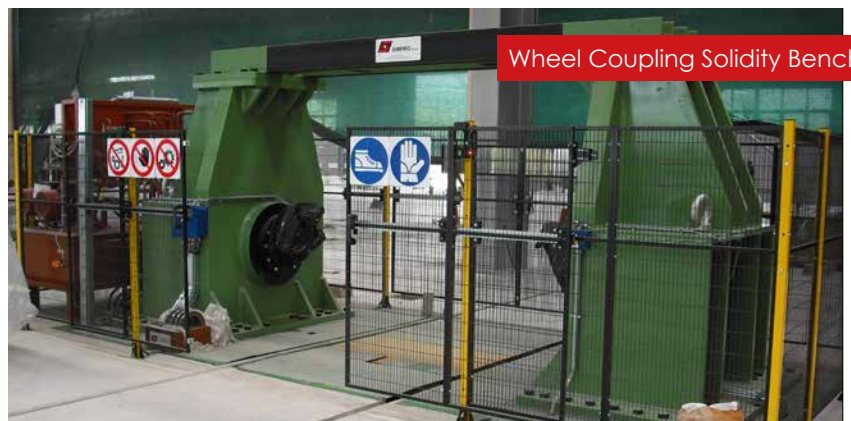

The machines design (2D, 3D, FEM, CFD) implies layout analysis, definition/ optimization of workloads and simulation of production flows.

The manufacturing systems are finalized in particular to **rolling stock welding or assembling** (wagons and subunits).

Simpro also provides tailor-made maintenance systems for **complete lines or subunits** (electro-diesel engine test or maintenance, wagon, wheels/ axle group).
